

Melfort Park: Clydebank

The site of the former St Eunan's Primary School, which is located in a residential neighbourhood of Clydebank, was inaccessible and severely contaminated. A new community greenspace will include biodiversity areas, raised bed allotments, outdoor education exercise areas, as well as new pedestrian routes between the town centre and housing areas.

Halfway Park: Glasgow

This project will completely transform an underused, awkward to access and bland open space to make a community park. Southside Housing Association in partnership with the local community and Glasgow City Council will provide opportunities for community growing, volunteer tree care and gardening apprenticeships along with creation of a rich, ecologically diverse landscape with native trees, nectar rich hedges, extensive wildflower meadow and herbaceous beds.

Fernbrae Meadows

A former golf course, this site has been transformed into a popular urban park. The park links three distinct communities through a series of inviting paths and cycleways. What's more, a dynamic local group drives much of the work here, and through a series of health walks, workshops and school visits, ensures this new greenspace is and will be a well used and valuable asset for all ages for many years to come.

Greater Easterhouse

This Glasgow site covers 29 hectares of land – a total which equates to over 30 Hampden Parks! A skilful transformation of vacant and derelict land in the eastern edge of the city has created an attractive urban greenspace which offers green corridors linking the area with the Seven Lochs Wetland Park. And ... the project has been completed whilst accommodating a nationally important population of water voles.
